

GALASSIE A SPIRALE

di faccia

di taglio

Via Lattea

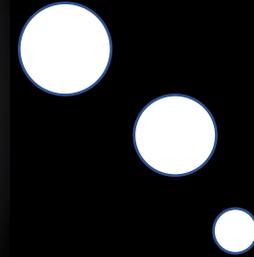

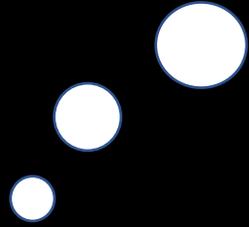

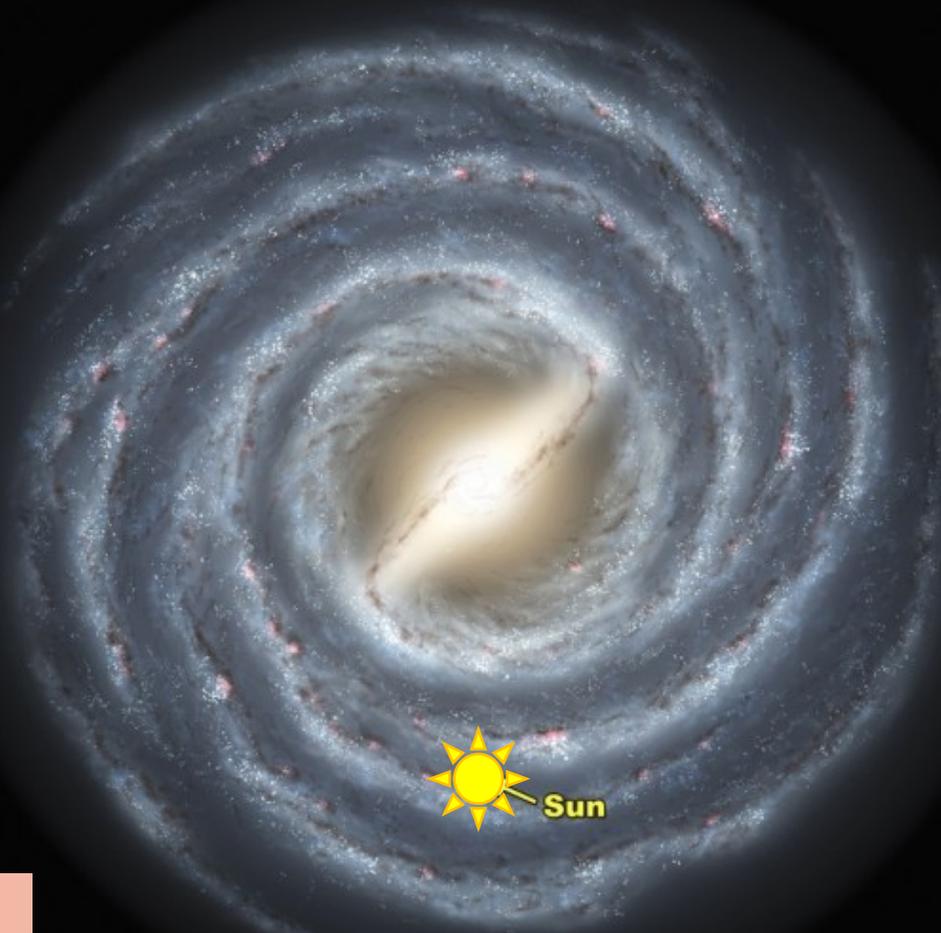

Da terra

Via Lattea

A wide-field photograph of the Milky Way galaxy as seen from space. The galaxy appears as a dense, horizontal band of light stretching across the center of the frame. The light is composed of numerous individual stars and is interspersed with dark, silty clouds of interstellar dust. The background is a deep black, filled with a sparse field of distant stars. The overall appearance is that of a vast, multi-armed spiral galaxy viewed from an edge-on perspective.

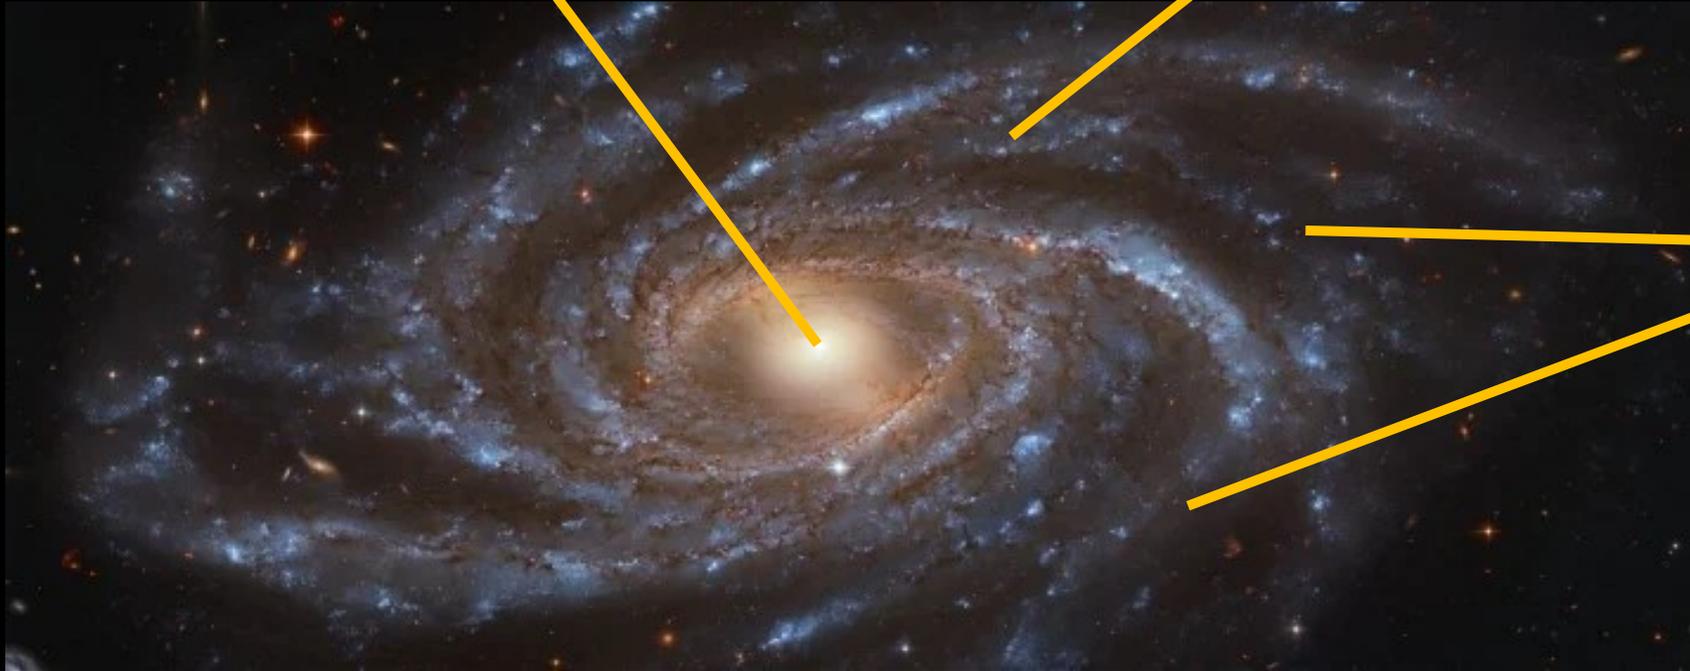

Dallo spazio

Via Lattea?

NUCLEO : stelle rosse

DISCO : stelle blu e gas

BRACCI (nel disco):

- Nubi di gas
- Stelle
- Polvere
